

of organ inferiority. It is possible however, that childhood schizophrenia and infantile autism may contain a CNS defect in its etiologic background. . . . The question of organ inferiority as a predisposing cause is complicated and must be individually answered" (p. 61). Seven treatment recommendations are given, basic among which is: "Try to prevent the child from developing the conviction that the defect is an insuperable obstacle to a useful and happy life" (p. 59).

WALDMAN, R. D. "Pain as Fiction: A Perspective on Psychotherapy and Responsibility." *Amer. J. Psychother.*, 1968, 22, 481-490.—"Fictional pain is both a creation and 'consequence' of the sick role that the patient has chosen, albeit for reasons of which he may not be aware" (p. 484). Such pain is "a tactic in the evasion of life's obligations and responsibilities." Such an approach to pain "allows for an interpretation of human action wholly consistent with the task of psychotherapy to enable man to become free" (p. 490). The author refers to Adler, Sartre, Szasz, and Vaihinger among others.

INDEX TO VOLUME 24, 1968
